PRODUCTION ENGINEER FIRST · AGENTIC TOOLING AND GOVERNANCE R&D

12+ years in software and systems engineering — from C/C++ and enterprise Java through APIs, identity, distributed systems and hands-on production ownership. More recently building GitHub-native agent workflows, repository intelligence and technical-ownership tooling. I focus on **making agentic delivery inspectable, testable and operable**, rather than presenting code generation itself as the product.

RELEVANT ENGINEERING FOCUS

Coding-agent workflows

GitHub issues / PRs / CI evidence

MCP / tool boundaries

Repository dependency intelligence

Local + hosted execution

Human approval / policy

Production operations

Java / Python / TypeScript

AGENTIC ENGINEERING — PUBLIC R&D

RepoGraph ↗

REPOSITORY INTELLIGENCE

Deterministic repository and dependency facts tied to a pinned Git revision; explores affected slices, provenance and reusable context for CI and agent workflows. Kept separate from policy and orchestration.

VibeGuard ↗

TECHNICAL OWNERSHIP CONTROL PLANE

Authenticated prototype for capability ownership, change-impact interpretation and PR-scoped review. Distinguishes mechanical evidence and model advice from decisions requiring explicit human authority; wider integrations remain in progress.

HackaTeam ↗

AGENT EXECUTION EXPERIMENTS

GitHub-native, documentation-first execution loops with workers, bounded task selection, issue/PR state, CI-based feedback and explicit escalation. R&D rather than a claim of enterprise-scale deployment.

PRODUCTION GROUNDING

Independent Systems & Product Engineer · Stynk

Oct 2025 – Present

- Independently build, deploy and operate a live construction-business CRM for ~20–25 users, including Angular frontend, Django REST APIs, PostgreSQL, Linux/Docker and CI/E2E.
- Own product semantics, integrations, security/permissions, deployment and support; use coding agents within an evidence-oriented delivery workflow.

Angular · TypeScript · Python · Django/DRF · PostgreSQL · Linux · Docker

COMMERCIAL SYSTEMS BACKGROUND

Full-stack Engineer · Hapag-Lloyd

Jun 2024 – Mar 2025

- Java/Jakarta EE work in event-driven logistics systems, replicated/configuration state and cross-service integration.

Java/Jakarta EE · event-driven systems

Full-stack Developer · Nordea

Aug 2023 – Mar 2024

- Java/Angular banking microservices and microfrontends with strict contracts, security and CI/integration gates.

Java · Angular · CI/CD

Full-stack Developer · Ciklum / EverC

Nov 2022 – Aug 2023

- Grails product engineering plus deployment/on-call, monitoring, AWS/Terraform/Kubernetes and production diagnostics.

Groovy/Grails · cloud operations · observability

Firmware Engineer · Intel

Oct 2021 – Mar 2022

- Embedded C NAND/SSD debugging and Python-based verification close to hardware/runtime constraints.

C · Python · testing

Software Engineer → Expert · Misys → Finastra

2013 – 2021

- Worked across C++/Java EE risk platforms: TopOffice, CMR, KGR, ALM, integrations, messaging and gradual modernization.
- Built shared UserManagement and a reusable multi-language C/JNI authentication core; supported CMR ORM→JPA migration and common REST/OpenAPI/OIDC boundaries toward FusionFabric.

Java EE · C/C++ · JPA · JMS · REST/OpenAPI · OAuth/OIDC

TECHNOLOGY & DELIVERY

Development	Java / Spring / Jakarta EE, C/C++, Python / Django, TypeScript / Angular, Groovy / Grails, SQL / PostgreSQL
Automation	Codex, Claude, GPT, GitHub Actions, GitHub API, MCP, local models / llama.cpp, CI evidence
Platform	Linux, Docker, AWS, Terraform, Kubernetes, Grafana, REST/OpenAPI, JMS, OAuth/OIDC
