

SZYMON ŻYREK

SENIOR FULL-STACK / BACKEND ENGINEER

stynkdev@gmail.com | szyrek@stynk.eu | +48 505 784 179 | Tricity, Poland · Remote / hybrid | Available immediately | [LinkedIn](#) | [GitHub](#)

12+ YEARS · JAVA / ENTERPRISE INTEGRATION · FULL-STACK OWNERSHIP

Senior engineer with 12+ years of commercial experience in enterprise Java, C++/Java financial platforms, banking systems, APIs and full-stack delivery. Currently independently building and operating a production CRM with Angular, Django, PostgreSQL and Docker/Linux. Comfortable owning the path from requirements and code to CI/CD, deployment, debugging and support.

CORE TECHNOLOGIES

Backend	Java / Jakarta EE, Spring, Python / Django REST Framework, Groovy / Grails, C++
Frontend	Angular, TypeScript, HTML/CSS; React collaboration
Integration & data	REST, OpenAPI, SOAP, JMS, OAuth / OIDC, PostgreSQL, SQL, JPA
Delivery & operations	Linux, Docker, CI/CD, GitHub Actions, AWS, Terraform, Kubernetes, Grafana

PROFESSIONAL EXPERIENCE

Independent Systems & Product Engineer / Technical Owner · Stynk

Oct 2025 – Present

- Built and operate a role-aware CRM and public website used by ~20–25 people: contracts, jobs, scheduling, pricing, documents, notifications, permissions and audit.
- Own domain modelling, Angular frontend, Django/DRF APIs, PostgreSQL, CI/E2E, Linux/Docker deployment, rollback, incident triage and direct user support.
- Adapt business logic through configurable models and pricing rules; maintain a tested delivery process while running the live product.

Angular · TypeScript · Python · Django/DRF · PostgreSQL · Docker · nginx · CI/CD

Full-stack Engineer · Hapag-Lloyd

Jun 2024 – Mar 2025

- Developed and maintained Java/Jakarta EE features in logistics systems handling operational events, integration and replicated state.
- Worked inside a domain-driven internal platform using shared models, validation and UI abstractions.

Java / Jakarta EE · distributed integration · event-driven systems

Full-stack Developer · Nordea

Aug 2023 – Mar 2024

- Delivered Java/Angular financing functionality within independently owned banking microservices and microfrontends.
- Worked against strict integration contracts, access/security boundaries, CI quality gates and cross-team dependencies.

Java · Angular · TypeScript · microservices · CI/CD

Full-stack Developer · Ciklum / EverC

Nov 2022 – Aug 2023

- Built and maintained fraud/risk product features in Groovy/Grails; participated in deployment, monitoring, on-call response and production debugging.
- Worked with AWS, Terraform, Kubernetes and Grafana, connecting software changes to production reliability.

Groovy / Grails · AWS · Terraform · Kubernetes · Grafana

EARLIER ENGINEERING EXPERIENCE

Firmware Engineer · Intel

Oct 2021 – Mar 2022

- Investigated NAND/SSD firmware issues in embedded C and supported verification with Python test automation, working at the software/hardware boundary.

Embedded C · Python · testing · debugging

Software Engineer → Expert · Misys → Finastra

2013 – 2021

- Debugged and evolved financial/risk applications such as TopOffice, KGR, ALM and CMR, spanning C++, Java EE and legacy persistence and integration concerns.
- Modernized CMR persistence incrementally from DataXtend ORM toward JPA while maintaining existing product behavior and delivery.
- Built UserManagement for shared users/permissions across previously separate products and a reusable C authentication core consumed by C++, Java/JNI and Objective-C.
- Helped normalize legacy products behind REST/OpenAPI, shared identity, messaging and deployment contracts on the path toward the integrated FusionFabric platform.

Java EE · C / C++ · JPA · SQL · REST/OpenAPI · JMS · OIDC · JNI

Web Developer · Południk

Earlier career

- Worked on PHP-based web applications and product development before moving into large enterprise systems.

PHP · web development

SELECTED STRENGTHS

Systems modernization
Incremental persistence and integration changes without treating existing business behavior as disposable.

Production ownership
CI/CD, observability, deployment and diagnosis as part of engineering rather than downstream hand-off.

Cross-boundary delivery
Backend, frontend, identity, messaging, data and UX in enterprise teams and as a solo product owner.
